

ODONATA

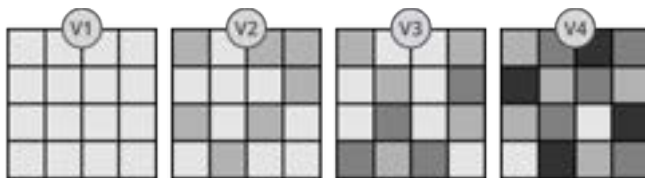

CERAMIC WALL TILES

VARIATION AS PART OF THE TILE DESIGN

Odonata is an example of how high variation tiles give a space a more natural or handmade look while tiles with low variation will give a space more elegance and polish. The shade variation rating of a tile indicates the degree to which its color, tone and texture vary among individual tiles.

V4 = Substantial Variation

Random color and/or texture differ from tile to tile, so that one tile may have totally different colors and/or texture from that on other tiles.
